

Do you want to make a difference and be at the forefront of the smart home market? Then join our project management team as a

Project Manager 80 - 100%

Are you inspired by the latest technologies and innovations in the area of the IoT? Do you have a structured approach to work, strong communication skills and stay on top of things even in very hectic situations? Is managing complex software projects in an interdisciplinary environment exactly your thing? Then send us your application because we are looking for you!

Responsibilities

In your role of project manager, you are responsible for delivering projects on time while keeping an eye on the goals and staying within the budget. You also master escalation management, resource planning and reporting with ease.

Qualifications

You have a degree in Computer Science, Mathematics, Physics or a comparable scientific course of study with at least 4 years of experience as a project manager/lead. You can work with Agile methodologies and have continuously expanded your experience in projects including APIs, cloud environments (IaaS/PaaS/SaaS), web applications, smartphone applications and web services. You have excellent skills in MS Office (Excel, Word, Outlook and PowerPoint) and Red mine/JIRA.

You have already successfully demonstrated your abilities in defining project goals and managing stakeholders, as well as schedules and tasks. Change management and crisis communication are among your strengths. Prior experience in project portfolio management and process definition would be preferred. You have excellent written and verbal communication skills in English. "Sprechen Sie deutsch?" That would be great! Prior experience in the areas of the smart home and the IoT would also be considered a plus.

Working Environment

The position is located at the digitalSTROM headquarters in Schlieren-Zurich. You can quickly assume responsibility in an international team with flat hierarchies and get started with your projects. At digitalSTROM, you have the opportunity to learn new things and further develop your skills. You will find exciting and meaningful challenges, an inspiring international company culture, flexible working arrangements and, above all, a smart home system with the potential to change the world. Let's grow together!

Additional information about our company is available on our website at www.digitalstrom.com or the social web on Twitter, Facebook and YouTube.

DigitalSTROM is a smart home platform that unites intuitive operation with easy installation. We equip all electrical and broad-band appliances in the home with their own intelligence and network them with both the Internet and each other. The result is a digital infrastructure in the home that can be extended at any time by additional applications via plug and play due to its open interfaces. The smart home places its residents at the centre and assists them with their daily household tasks. DigitalSTROM brings this intelligence to the home for everyone and transforms traditional home technology into the digital world.

Please send your complete application documents to our Human Resources department:
